# BUSINESS REPORTING

- 1. Informed Decision-Making:** Accurate and timely reports provide the necessary information for stakeholders to make well-informed decisions. Whether in business, government, or other sectors, having reliable data is critical for strategic planning and operational adjustments.
- 2. Transparency and Accountability:** Reporting fosters transparency and accountability within organizations and to external stakeholders. Regular and honest reporting builds trust and ensures that all parties have a clear understanding of the organization's activities and outcomes.
- 3. Performance Measurement:** Through reporting, organizations can measure and track performance over time. This enables the identification of trends, strengths, and areas for improvement, facilitating continuous growth and development.

**"We are guided by four principles: customer obsession rather than competitor focus, passion for invention, focusing on our commitment to operational excellence, and forward thinking. In each of our segments, we serve our primary customer sets, consisting of consumers, sellers, developers, enterprises, and content creators that all securely contribute the movement of money."**

# TYPES OF REPORTING

**Financial Reporting:** This type involves the preparation of financial statements, including income statements, balance sheets, and cash flow statements. Financial reporting provides insights into a company's financial health and performance over a specific period.

**Operational Reporting:** This focuses on the internal aspects of an organization's performance. It includes metrics and data related to productivity, efficiency, and the effectiveness of various processes within the company. Operational reports help in decision-making and improving organizational processes.

# OLAP REPORTING PLATFORMS

Alien WARP has 3 comprehensive OLAP platforms to access business network data. Today, OLAP database systems have become comprehensive and integrated data analytics platforms, addressing the diverse needs of modern businesses. They are seamlessly integrated with cloud-based data warehouses, facilitating the collection, storage, and analysis of data from various sources. The line of management can introduce the means to configure your business credentials to contribute to the context of buying and selling, to determine on this reporting platform, the fact-driven movement of money as part of a network of operational outlets, as part of a network franchise. The various platforms provide access to the line of command at every retail or service location, to regional management online, or at the head office as part of franchise administrative management.

In computing, online analytical processing, or OLAP, is an approach to quickly answer multi-dimensional analytical queries. The term OLAP was created as a slight modification of the traditional database term online transaction processing.

[Alien Automation](#) software users now have access to a game-changer, our Data Management tool, at ***no additional cost in addition*** to the current monthly fee.

Added to your account portal page as a business owner, ***OLAP (Online analytical processing)*** focuses on: Business Intelligence. By analyzing and managing data relating to business operations, the software helps to identify ***trends***, possible product ***improvements***, and gives business owners ***strategic control over Stock, sales, Orders, and accounts details***. Customer ***preferences*** and additional business ***opportunities*** can also be identified.

In your client environment, all clients using their ***On-line portal*** will find that it has also just become even more powerful than real-time transaction detail, invoices, and statements by affording them control over their vehicle orders and fuel/service allocations. It is not only BI (Business intelligence) either.
